# Report on the main results of the surveillance under article 11 for annex II, IV and V species (Annex B)

population size equals the number of grid cells resulting from its distribution, while the maximum population size equals the number of grid cells resulting from its range.

	unknown		No
	method	Expert opinion-Reference population is greater than actual size, after comparing the minimum estimated population sizes (unit: number of 10x10 grid cells) in the assessed populations with the recent documented historical records (using the same unit -10x10 grid cells)
